A Higher Standard of Doors

Ignacy Barański

Barański®
DRZWI

Barański Doors is one of the largest and most respected manufacturers of wooden doors in Poland. We are experts in wood—we understand it inside and out and know how to bring out its very best. For more than 35 years, in the picturesque heart of Warmia and Masuria, we have been crafting doors that raise the bar and define a higher standard. Thanks to advanced technology and premium-quality equipment, our exterior doors capture attention and impress for years to come.

WOOD IS OUR FOUNDATION

We rely on natural materials. The laminated pine structure ensures exceptional durability, while the oak finish adds elegance and highlights the beauty of the natural wood grain.

DESIGNED FOR YOU

We are not limited by standard solutions. Every door is individually tailored to your project, with dimensions, construction and design created according to your vision.

PREMIUM DOOR HARDWARE

We have carefully selected premium standard equipment, while customers looking for even more can choose from a wide range of elegant door hardware and innovative smart solutions.

This catalog includes door designs registered for protection as Community Designs with the European Union Intellectual Property Office (EUIPO) in Alicante. Design rights belong to Barański Drzwi Sp. z o.o. for the following models: DB 711, DB 718, DB 719, DB 726, DB 727, DB 740, DB 741, DB 745 and DB 763.

PRODUCT CHARACTERISTICS

THE NATURAL CHARACTER OF WOOD

- Wood is a natural material with a unique grain structure, making every door distinctive and one of a kind.
- The inherent properties and natural character of wood may result in color variations at joints, differences in shade between individual door components and variations in grain symmetry.
- The examples shown in the adjacent photographs illustrate characteristic product features that emphasize its uniqueness and do not constitute grounds for a complaint.

SEALANT COLOR MATCHING

- The color and gloss level of the sealant may differ from the color and gloss level of the door finish.
- Clear sealant may appear different in color depending on where it is applied, for example next to glass or between wooden components.
- Differences in color or gloss, as illustrated in the adjacent photographs, are characteristic product features that emphasize its uniqueness and do not constitute grounds for a complaint.
- For standard door colors, the corresponding sealant color is shown on pages 96–98 of this catalog.
- A complete list of sealants used for the RAL K7 Classic palette is available for download at www.baranskidrzwi.pl/do-pobrania.
- The colors shown may differ from the actual colors due to print quality or screen settings.
- For NCS colors, the manufacturer reserves the right to select the sealant color at its discretion.

ROFESSIONAL ADLER CARE KIT

- Beschlagöl Door Fittings Oil – 20 ml
- Top Cleaner for Wooden Surfaces – 100 ml
- Top Finish Protective Care Emulsion for Wooden Surfaces – 100 ml
- Cleaning Cloth

OPERATING AND INSTALLATION REQUIREMENTS

- The door should be installed by a specialized installation company.
- The door must be installed and used only in buildings where all interior wet works have been completed. Failure to follow this requirement may void the product warranty.
- Adequate and continuous ventilation must be provided, particularly after wet trades have been completed. Insufficient ventilation may cause the wood to swell, damage the coating and lead to deterioration of the product.
- The exterior side of the door must be protected by a canopy that prevents precipitation from reaching the door surface. On the interior side, any heat source must be located at least 150 cm from the door.
- Detailed installation and operating requirements are provided in the warranty document available for download at www.baranskidrzwi.pl/do-pobrania.

MAINTENANCE

Internal Door Fittings

- Lubricate hinges and locks as required using a dedicated lubricant, such as Adler Beschlagöl.

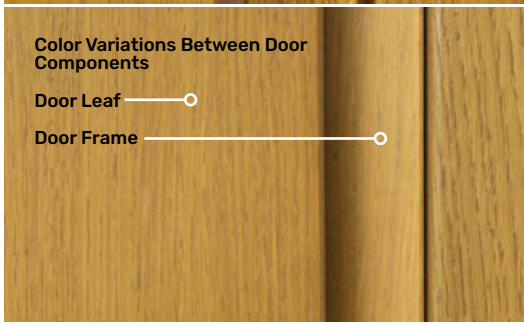

External Door Fittings

- Door handles and pull handles should be cleaned regularly, as required, using a soft cloth and warm water without household detergents.
- Brass door fittings naturally develop a patina over time. This is a normal process and does not constitute grounds for a complaint.
- High-gloss fittings, such as polished brass or polished nickel, are particularly susceptible to fingerprints, dirt and micro-scratches. These are characteristic features of this type of finish and do not constitute grounds for a complaint.
- Use only products intended for the specific metal surface, such as Starwax Brass, Copper & Bronze or Starwax Multi-Metal Cleaner.

Door Surface

- The door surface should also be cleaned regularly, as required, using a soft cloth and warm water without detergents or with products intended for wooden doors, such as Adler Top Cleaner.
- Do not use solvents, alkaline or corrosive products, chlorine-based cleaners, sanitary fixture cleaners, or cleaning creams containing sand or other abrasive substances.
- Avoid repeatedly rubbing the same area, as this may damage the coating.
- The door surface should be refreshed every 12 months using a dedicated wooden door care product, such as Adler Top Finish. After cleaning the door, apply Adler Top Finish to a soft cloth and distribute it evenly over the surface. This helps seal micro-scratches and pores in the coating and creates a protective layer that limits water penetration and helps prevent oxidation of the finish.
- During construction work, protect the door with nonwoven fabric secured at selected points with tape. Remove the cover after each work session. Covering the door with airtight plastic film may cause glossy marks to appear on the finish.

DOOR CONFIGURATIONS

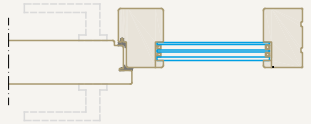

Additional cost

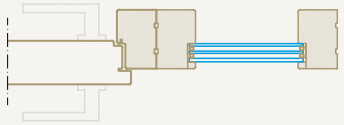

IN-FRAME VERSION VS. BOLT-ON VERSION

Due to technical and logistical limitations, large-size configurations are manufactured from several elements that are subsequently bolted together. The bolt-on version features a double mullion where two elements are joined. In-frame configurations, however, are manufactured within a single door frame and feature a single mullion. The adjacent table shows the maximum dimensions for both versions. Arched elements are always manufactured as bolt-on versions, regardless of their dimensions.

Example of the In-Frame Version
Modern Rebated Side Panel

Example of the Bolt-On Version
Modern Rebated Side Panel

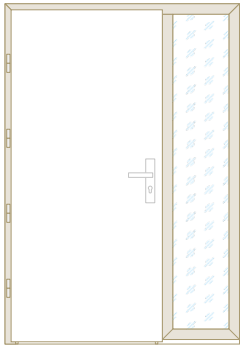

MAXIMUM DIMENSIONS [mm]

	Door Configuration	In-Frame		Bolt-On

Hammered brass is a natural brass finish that develops a patina and changes color unevenly over time. This is an inherent characteristic of the material and does not constitute grounds for a complaint. Minor surface imperfections and irregularities are also characteristic of this finish and are not considered defects.

HOW DOES VENETIAN MIRROR GLASS WORK?

Venetian mirror glass acts as a mirror on the brighter side by reflecting light and ensuring privacy, while from the darker side it functions as transparent glazing. During the day, when outdoor light is stronger, people outside see only their reflection. At night, when the interior is illuminated, the effect is reversed and visibility from outside increases. Proper lighting conditions are essential for achieving the desired mirror effect.

Additional charges for glazing options – see page 122.

* P4 RC2 security glazing features a laminated outer pane and is RC2 certified.
P4 security glazing features a laminated middle pane and is not RC2 certified.

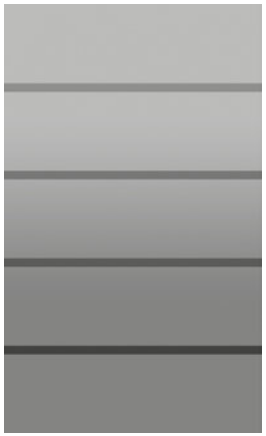

Due to printing limitations, the actual appearance of glazing may differ from the photographs shown in the catalogue. Please consult your distributor before placing an order.

Glass Sandblasting

- The patterns shown below are transparent; only the background is sandblasted (except 02P Reverse Stripes).
